GNCORE / HISTORICAL IDE PILOT

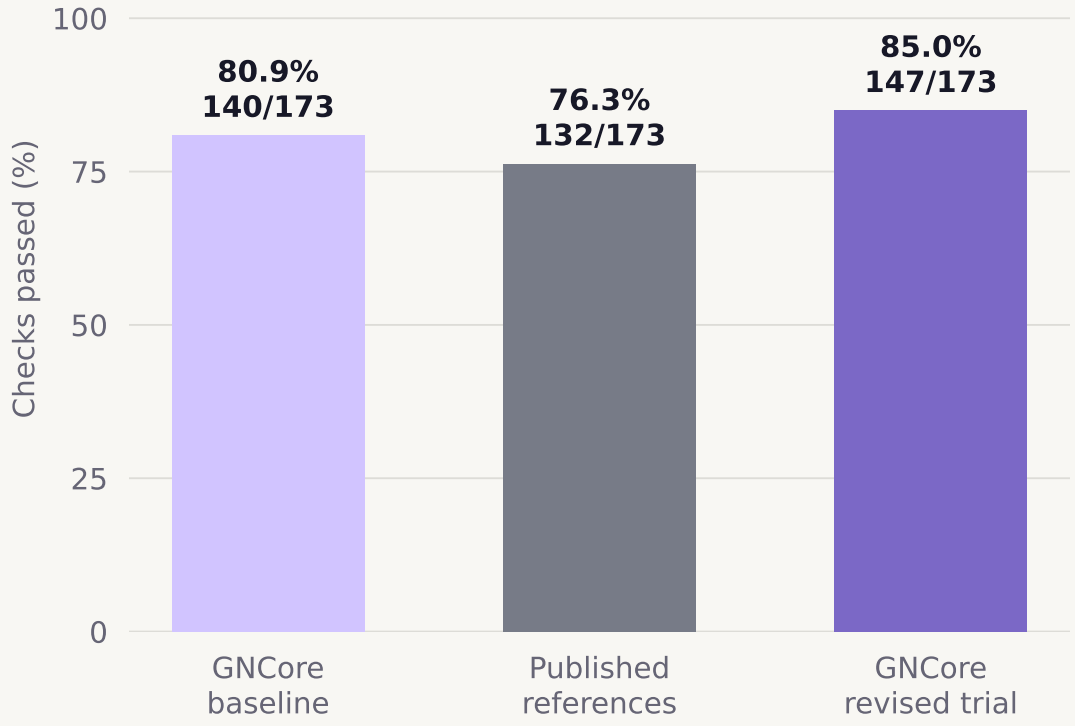

Same tasks. Results you can inspect.

Passed review criteria / 173 applicable checks per condition. 29 non-UI categories.

VS Code / Copilot Auto

Antigravity

29 Oct 2026 · Single unblinded pilot · Prior guides, not current-release accuracy · UI unmeasured · No universal ranking

All 30 categories, including open measurements.

Historical holdout review. Each cell shows passed / applicable checks and the percentage.

Open measurements remain gray. Small denominators and one task per category do not establish future success rates.

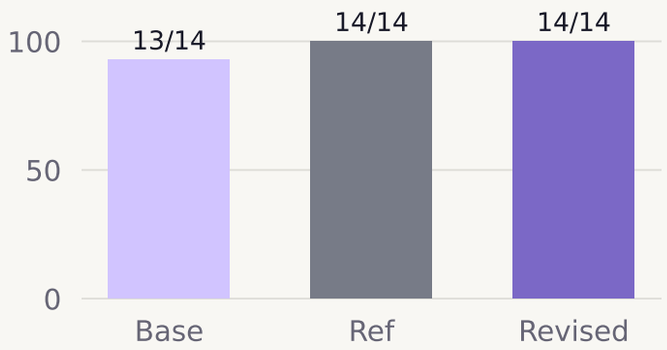

Focused checks for generated implementations.

Historical pilot artifacts. Frozen test outcomes are separate from manual review scores.

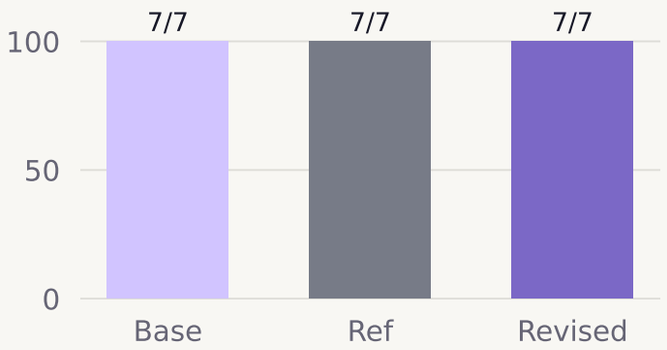

VS Code
Allocation · 16 cases

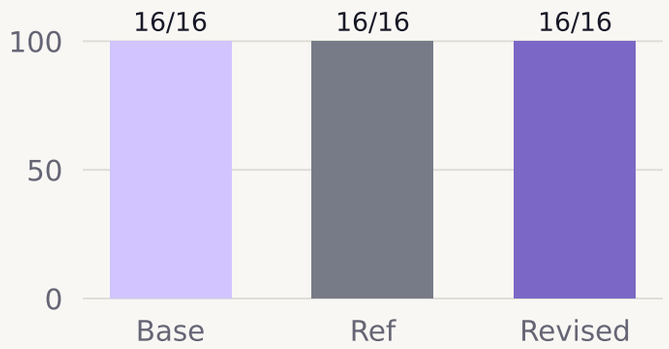

VS Code
Loss & gradients · 14 cases

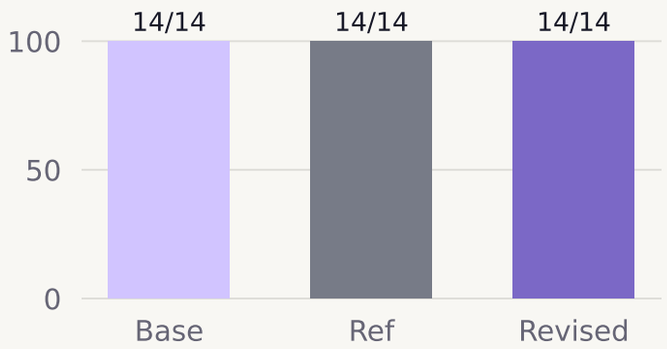

VS Code
Implementation + 6 mutants

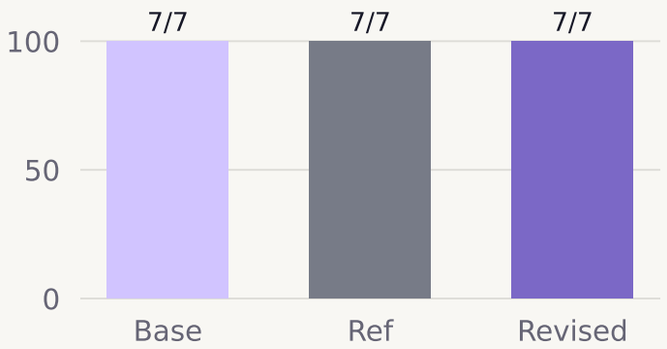

Antigravity
Allocation · 16 cases

Antigravity
Loss & gradients · 14 cases

Antigravity
Implementation + 6 mutants

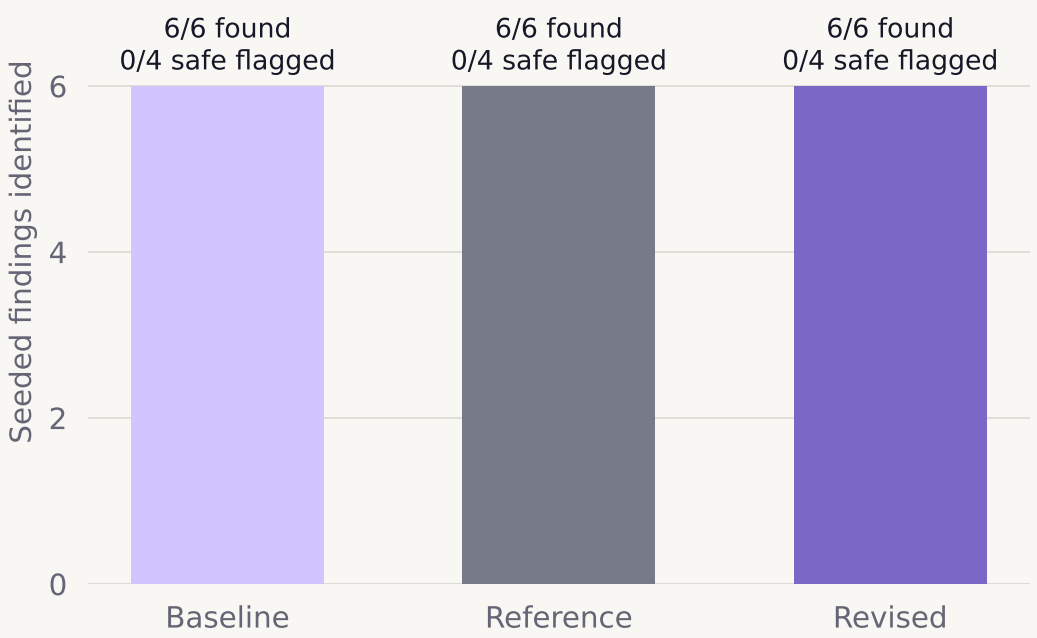

All three arms tied on several fixtures. The revised VS Code allocation later failed 3/3 exploratory cases; follow-up repairs are separate.

GNCORE / SECURITY FIXTURE

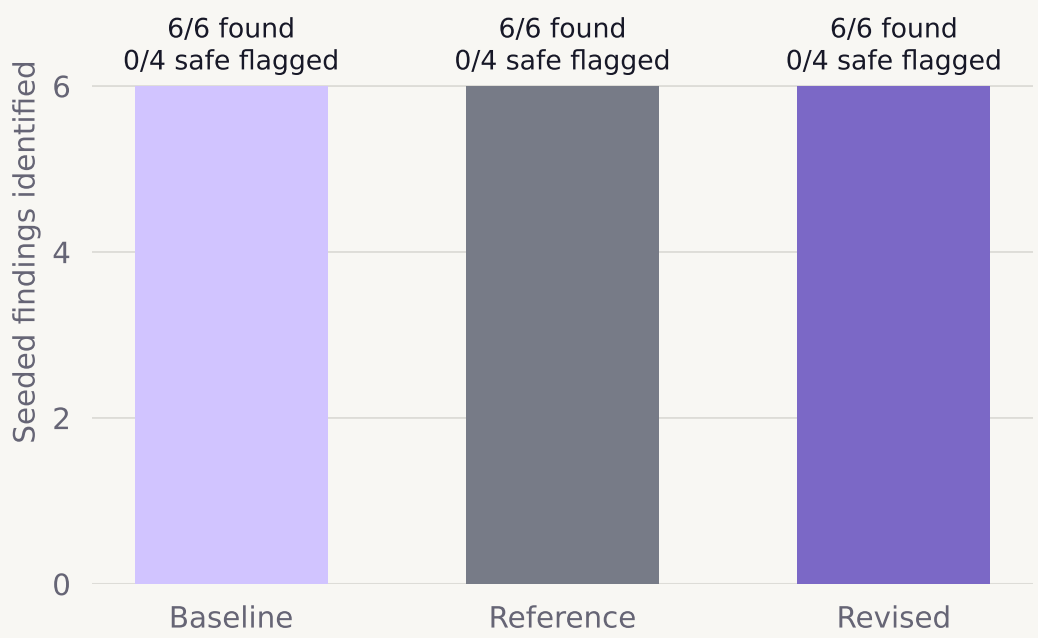

Six seeded findings. Four safe controls.

Manual review of a supplied fixture; exploits were not executed. All three conditions tied.

VS Code / Copilot Auto

Antigravity

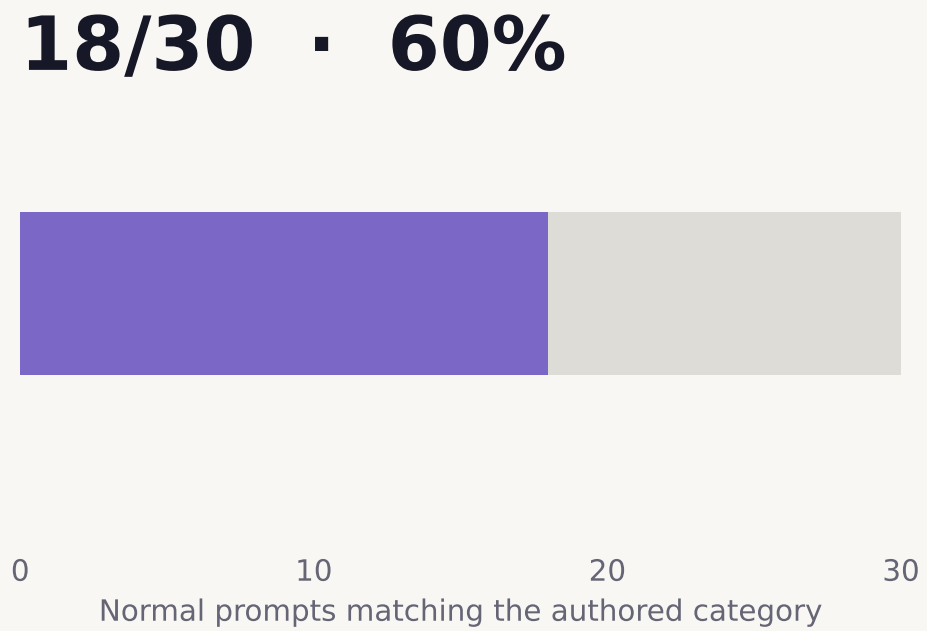

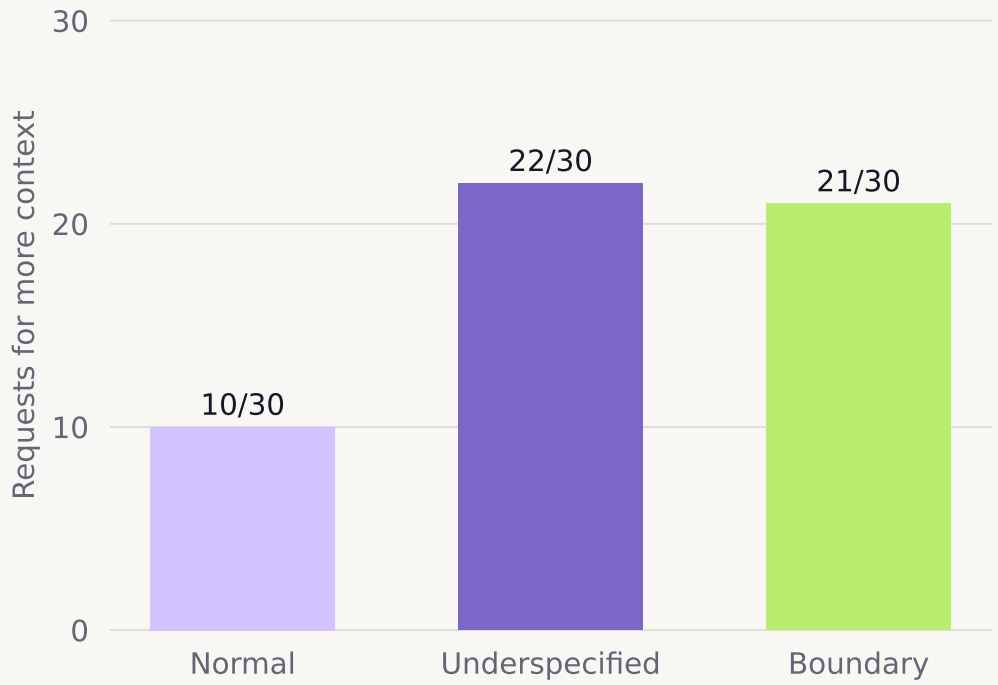

A bounded fixture result, not a production security rating. Source findings, repair checks and safe-control counts remain inspectable.

GNCORE / ROUTING CORPUS

Routing is measured separately from skill quality.

Authored diagnostic prompts. These are in-corpus observations, not a held-out comparison.

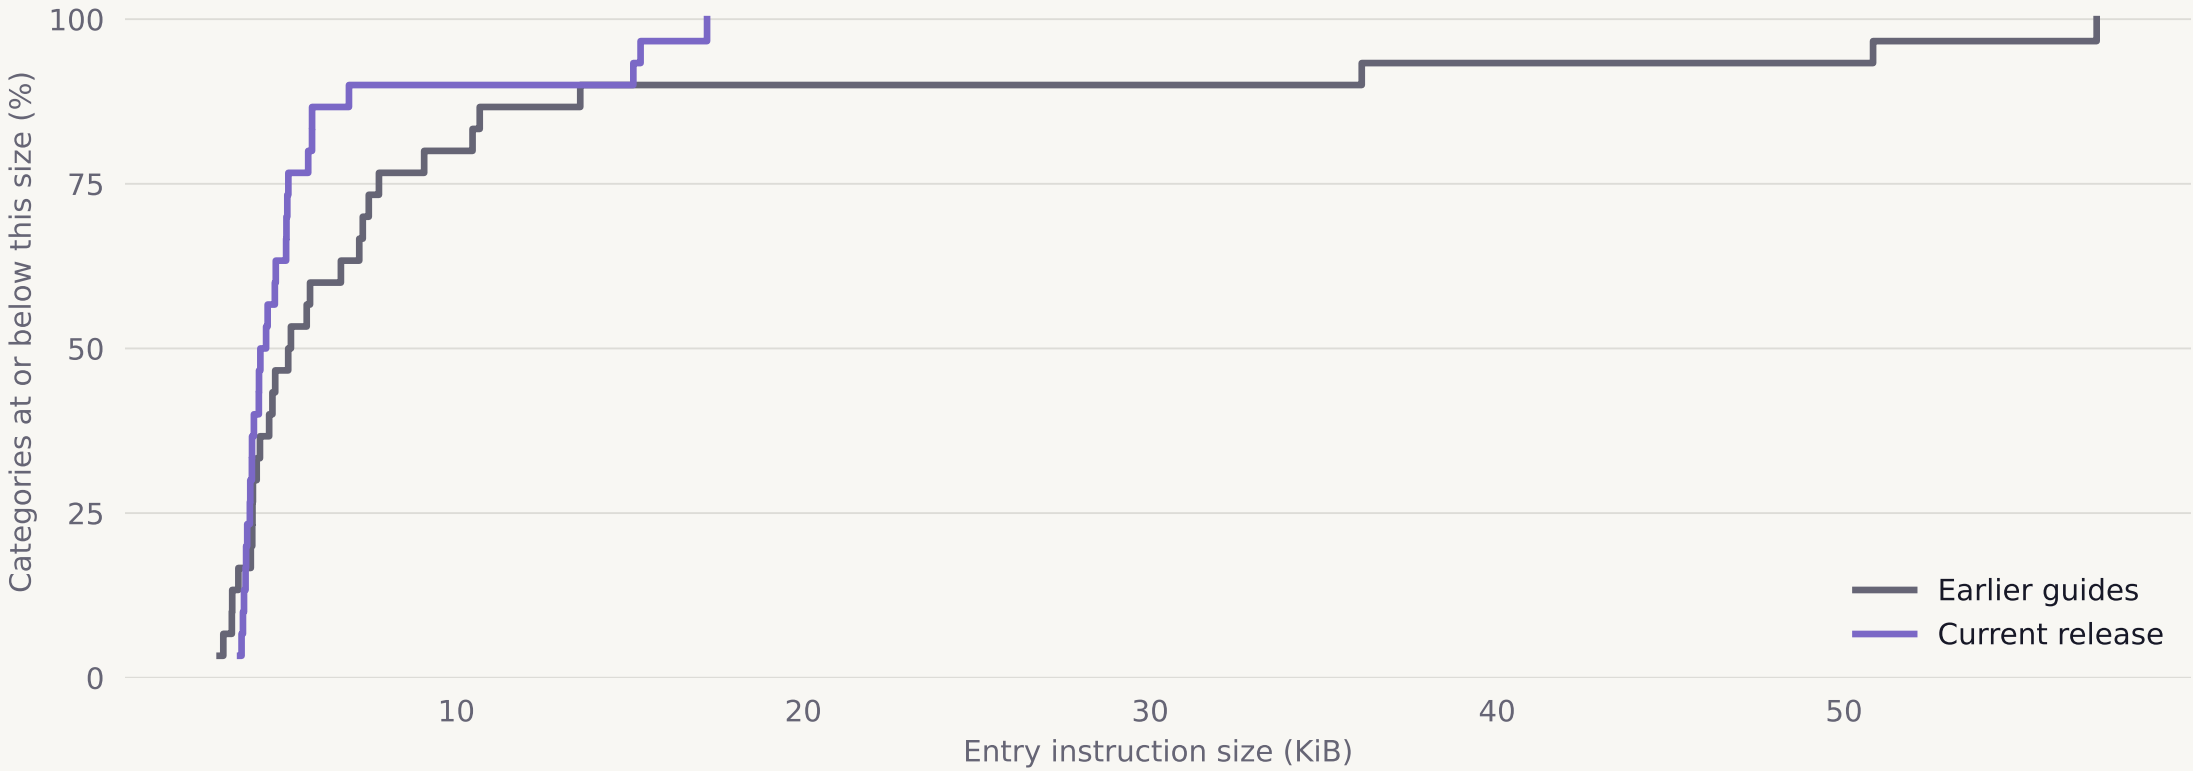

Context requests can be appropriate for vague prompts. This chart does not count every abstention as an error or claim 90–97% routing.

GNCORE / ENTRYPOINT SIZE

Focused entrypoints. Detailed procedures on demand.

Distribution of UTF-8 SKILL.md bytes across all 30 categories; supporting resources remain available.

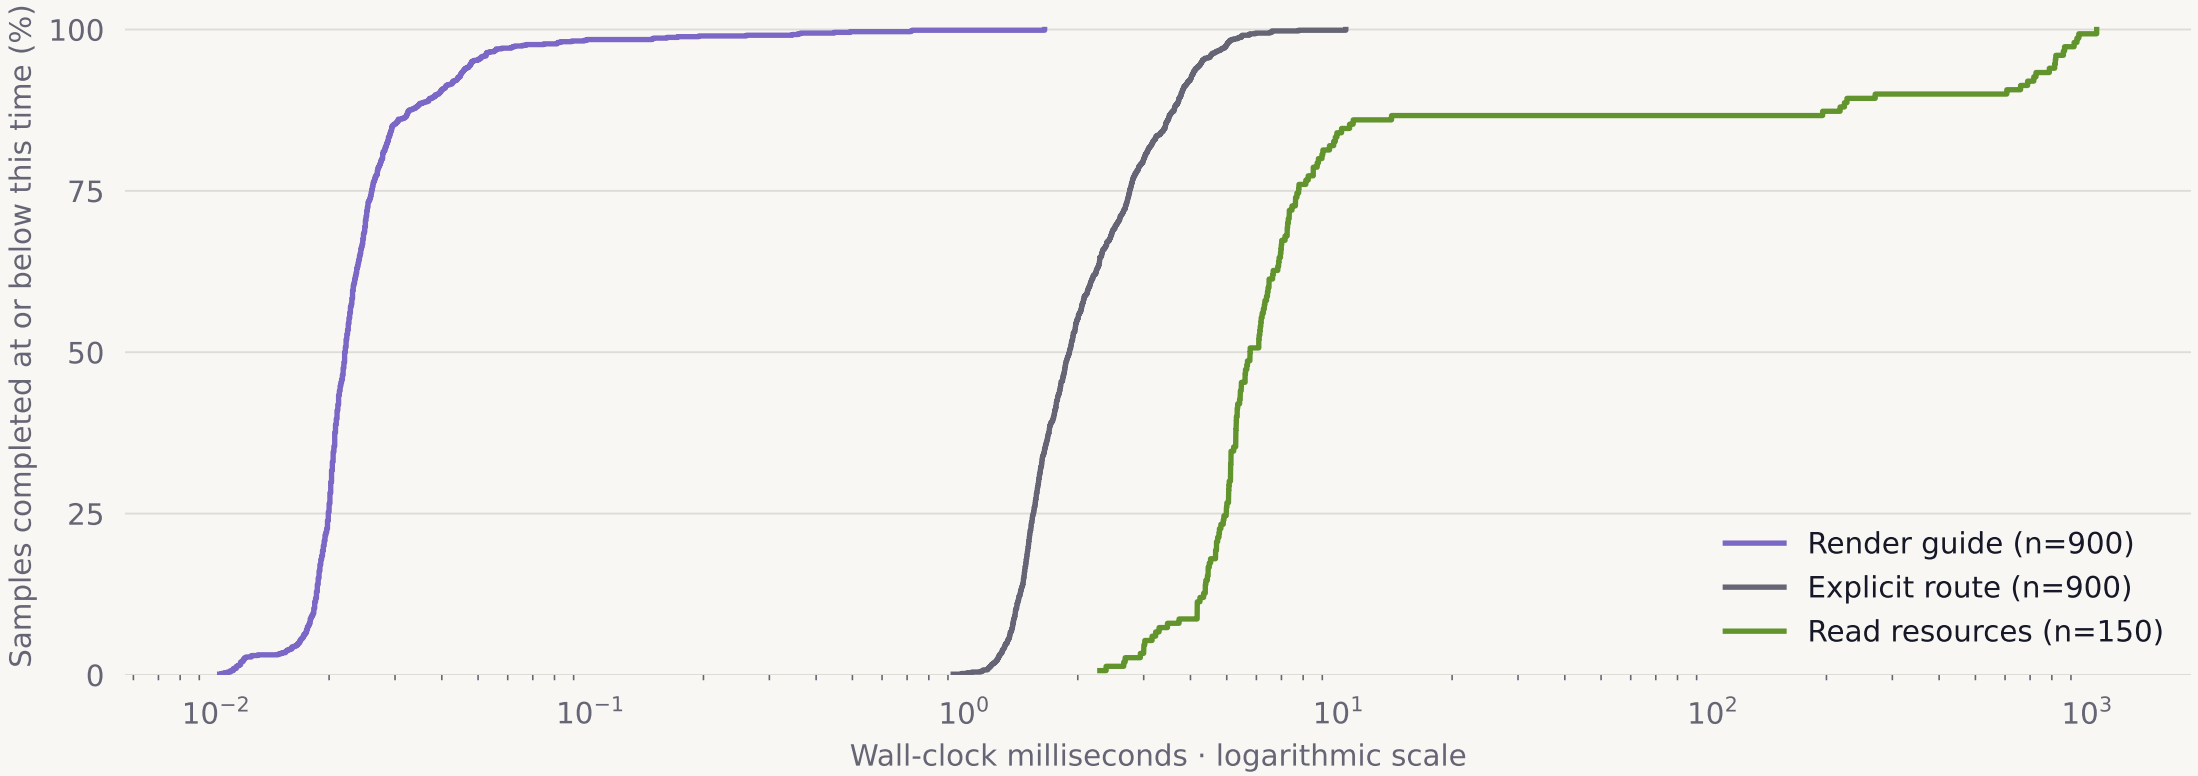

Measured bytes, not tokens, inference speed or cost. Baseline source revision: 62c4c99. All workflow IDs are retained.

GNCORE / LOCAL LIBRARY OPERATIONS

Warm local timing, with its scope visible.

Cumulative distribution of recorded samples. CPU + filesystem only; excludes IDE and model inference.

Recorded 2026-10-30 · 7.0.0 · warmups and uncontrolled filesystem caches · no cross-provider speed claim
