GNCORE / PRACTICAL SKILL COMPARISON

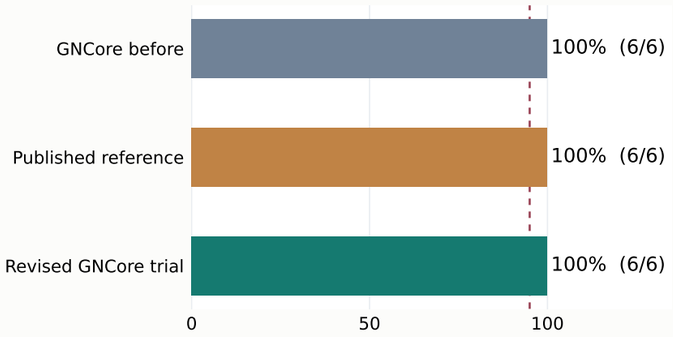
What passed, and what still needs work

Original Microsoft VS Code / Copilot Auto | Holdout tasks | 30 developer categories

References: 14 pinned repositories, including Anthropic, Microsoft, Google, Hugging Face, Vercel and domain specialists.

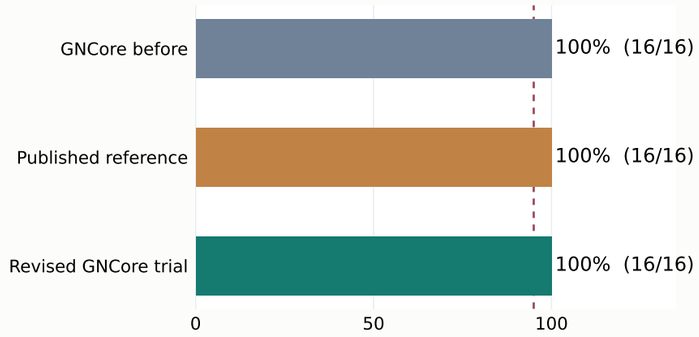
Defects correctly identified

Six seeded issues; manual review



Code repair: frozen tests

Additional exploratory regressions are separate

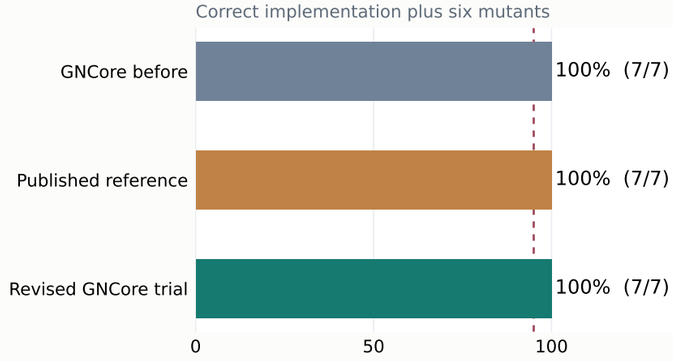


Numerical correctness

Loss, gradients, stability and validation

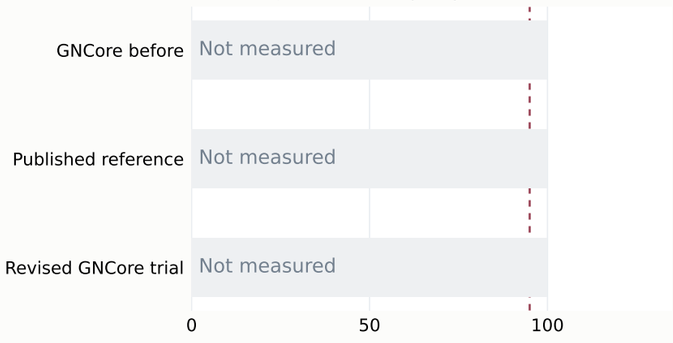
Tests that catch bugs

Correct implementation plus six mutants



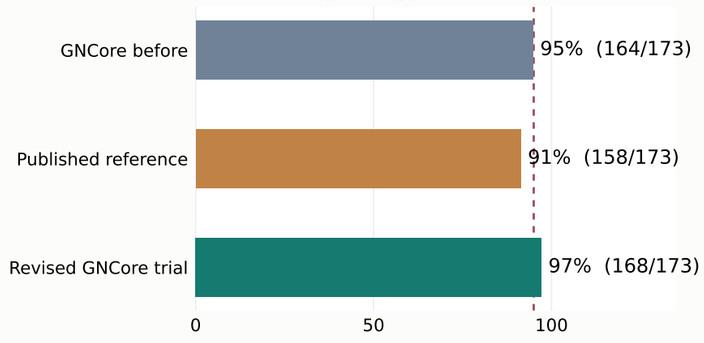
Web interface behavior

Form flow, focus and 390px layout



Other task checks

29 non-UI categories; applicable reviewed criteria



All categories: task checks passed

	Before	Reference	Revised trial
AI Engineering	100% 6/6	100% 6/6	100% 6/6

Web Frontend	N/A	N/A	N/A

Read the percentages as passed checks, not a universal efficiency or security rating. 95% dashed line = goal only.

Pilot: one task per category per split and condition; no repeated trials or significance claim. References vary by category. Gray = not measured.

Manual review is unblinded. Models/IDE context can affect results. Raw answers, criteria, source revisions and logs accompany this report. 29 October 2026.
